References

Turns steps of the form

$$\begin{array}{c} H_{\pm\alpha_i+j\delta} \\ + \quad | \quad - \\ c \longrightarrow \end{array} \quad \text{or} \quad \begin{array}{c} H_{\pm\alpha_i+j\delta} \\ - \quad | \quad + \\ c \longrightarrow \end{array}$$

into

$$\begin{array}{c} H_{\pm\alpha_i+j\delta} \\ + \quad | \quad - \\ c^{-1} \longleftarrow \end{array} \quad \text{or} \quad \begin{array}{c} H_{\pm\alpha_i+j\delta} \\ - \quad | \quad + \\ c^{-1} \longleftarrow \end{array}$$

If $c = 0$ we cannot fold and if $c \neq 0$ we must fold!

This last bijection makes our Whittaker functions extremely computable!
